OBJECTIVE

Final-year BSc Software Engineering student at SDU (graduating January 2027) who builds complete, production-ready products end to end and is focused on AI engineering. Recent work includes a Kotlin Multiplatform carpooling app on a NestJS/PostgreSQL backend with CI/CD and k6 load testing, a React/TypeScript/Supabase web app with LLM analysis in serverless functions, and a RAG-based semantic search for my bachelor's project. Two years of freelance QA at uTest (Silver tier) mean I test what I ship. Available to start.

I use AI tools as an assistant to work more efficiently while keeping my own critical thinking in charge of every decision. I practice discipline by planning my tasks and finishing work on time. Through continuous learning, discipline, and reliability, I aim to contribute from day one and grow into a well-rounded engineer.

EDUCATION

BSc in Software Engineering, @ University of Southern Denmark (SDU), Sønderborg, Denmark Sep 2023 - Jan 2027

In progress, expected January 2027. OOP, Data Structures & Algorithms, Cybersecurity, Cloud Computing, Software Architecture, Mobile Software Development, AI, Web Technologies.

Core Competencies

Full-Stack Development: React, TypeScript, Vite, Tailwind CSS, Node.js, NestJS, Prisma, PostgreSQL, Supabase (auth, row-level security), REST APIs, Vercel and serverless functions.

AI & ML Engineering: LangGraph AI workflows with human-in-the-loop review, RAG pipelines and semantic search, LLM integration (Groq, gpt-oss), GitHub Copilot (Microsoft Applied Skills certified).

Mobile & Other Stacks: Kotlin Multiplatform, Jetpack Compose, SwiftUI; Java/Spring Boot, C#/.NET, Python/Django, PHP/Laravel; MySQL, MongoDB.

Quality & Testing:Exploratory, functional and regression testing; bug reporting; TDD, Pytest, XUnit; k6 load and stress testing.

DevOps & Process: CI/CD pipelines, Git/GitHub, Docker, Linux; Agile sprints across the full SDLC; Jira, Linear, UML.

PROJECTS

Topic Trail (Bachelor's project) — *Sep 2026 - Dec 2026*
SDU, In progress

- ***Passive detection of browsed content**, with a **relevance filter** based on mathematical calculations that keeps only meaningful content.*
- *Personal dashboard searchable by keyword or with a **semantic search built on a RAG pipeline**.*
- ***Agile sprints** following the full **SDLC**, with **test-driven development (TDD)** and sprint planning in Linear.*

Ridly, a carpooling app — *Apr 2026 - May 2026*
github.com/Habibwasi/HOP-KMP

- *Cross-platform app with **Kotlin Multiplatform** sharing business logic between a Compose Android UI and a native **SwiftUI** iOS app, on a **NestJS, Prisma and PostgreSQL** backend.*
- *Single or recurring trips, seat booking, **real-time chat** and a trust-based payment flow.*
- *Built with a custom **LangGraph AI workflow**, with me as the **human-in-the-loop** reviewing every change; **CI/CD** tests and builds both apps on every push and pull request.*
- ***Load and stress tested the API with k6**: trip search ran in **p95 96 ms at the 300-VU stage**; identified the hosting tier as the capacity ceiling, with horizontal scaling as the planned fix.*

Validation Portal, web app for startup founders — *Mar 2026 - Apr 2026*
github.com/Habibwasi/Validation-Portal | ***Live Demo***

- *Public surveys, customer interview logs and a hypothesis board; dashboard with charts, email notifications and PDF export.*
- ***React, TypeScript, Vite and Tailwind CSS** with **Supabase** (PostgreSQL, authentication, **row-level security**), deployed on Vercel.*
- ***AI analysis with gpt-oss-20b** in **serverless functions** turns collected data into themes, key quotes and next steps, keeping the API key off the browser.*

Further projects

- ***Undershelf**: **Python/Django** book search and recommendation app with BST search and a **TF-IDF and graph-traversal hybrid recommender**; **80%+ Pytest coverage**.*
- ***Heat.IT**: **C#/.NET (Avalonia)** district heating optimisation desktop app with **XUnit** tests, **UML** design and code reviews.*
- ***Deskinct**: **PHP/Laravel** IoT smart desk system integrating Linak desk **REST APIs** with a Chart.js analytics dashboard.*

EXPERIENCE

QA Tester (Freelance) @ uTest, Applause *Jun 2024 - Present*
Remote

- ***Silver rating (92.26%)**.*
- *Took part in **268 test cycles** across **100 products**, **executing 234 test cases and reporting 46 issues** for well-known consumer and fintech clients.*
- ***Exploratory, functional and regression testing** across web, mobile and desktop, with detailed bug reports and reproduction steps.*

Courier (Part-time) @ Just Eat Takeaway.com *Feb 2025 - May 2026*
Vejle, Denmark

- ***91% on time and 99% traffic rules followed**; performance numbers among the highest in the country.*
- *Represented the company on the ground and kept good working relationships with colleagues and partner businesses.*

CERTIFICATIONS

- ***Microsoft Applied Skills**: Accelerate AI-assisted development by using **GitHub Copilot** (Microsoft, Oct 2026)*
- *Introduction to Databases for Back-End Development (Meta, Nov 2025)*

LANGUAGES

English (fluent), Danish (A2, learning), Bengali (native).

ACTIVITIES

Gym, lære Dansk, badminton, research, chess, card tricks ....(Still exploring)
